REASON FOR ALLOWANCE

1. Jones, Daniels et al and Shumaker are cited to show a wheel comprising a rim with a plurality of fabric strips and plies comprising a fibre fabric incorporated in a matrix material each having a longitudinal axis and generally oriented orthogonally to the central hub axis. Schloss discloses a rotary buff comprising a plurality of radially extending fabric plies presenting adjacent peripheral buffing edges. However, none of the references of record suggests a bicycle wheel hub, wherein at least one of the plurality of strips has a plurality of extensions along a lateral edge thereof in the manner defined in the instant claim 36 and in combination with other limitations of the claims. Also, none of the references of record suggests a bicycle wheel hub having a hollow tubular body, wherein at least one of the plurality of strips has a combination of a plurality of recesses and a plurality of extensions along a lateral edge thereof in the manner defined in the instant claim 37 and 55 and in combination with other limitations of the claims. Moreover, none of the references of record suggests a bicycle wheel hub having a hollow tubular body, wherein the plurality of fabric plies are located on multiple sides of the hollow tubular body to form a complete layer of the tubular body in the manner defined in the instant claim 41 and in combination with other limitations of the claims. In addition, none of the references of record suggests a bicycle wheel hub having a hollow tubular body comprising a plurality of fabric plies at the edges of the tubular body, wherein the plurality of fabric plies are provided in pairs on diametrically opposite sides of the hollow tubular body in the manner defined in the instant claim 42 and in combination with other limitations of the claim. Also, none of the references of

Art Unit: 3617

record suggests a bicycle wheel hub, wherein the pairs of the plurality of fabric plies are angularly spaced from each other when the pairs are viewed along the central hub axis in the manner defined in the instant claim 43 and in combination with other limitations of the claims. Moreover, none of the references of record suggests a bicycle wheel hub. wherein the pairs of the plurality of fabric plies are spaced by approximately ninety degrees when the pairs are viewed along the central hub axis in the manner defined in the instant claim 44. Furthermore, none of the references of record suggests a bicycle wheel hub, wherein the central portion has a first cross sectional thickness, the first and second ends having a second cross sectional thickness greater than the first cross sectional; thickness, the intermediate portion having an increasing cross sectional thickness as one mover from the central portion outwardly in the manner defined in the instant claim 46 and in combination with other limitations of the claims. In addition, none of the references of record suggests a bicycle wheel hub, wherein the hollow tubular body is asymmetrical about a central plane oriented orthogonally to the central hub axis in the manner defined in the instant claim 49 and in combination with other limitations of the claims. Therefore, claims 38-39, depending therefrom, are considered to be allowable.

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frantz F. Jules whose telephone number is (703) 272-6681. The examiner can normally be reached on Monday-Thursday and every other Friday.

Art Unit: 3617

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph S. Morano can be reached on (703) 272-6684. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
